## Práctica 1

Realizado por: Javier Garrido Montes

Para la realización de esta práctica, he creado dos máquinas virtuales de ubuntu server en VirtualBox siguiendo el guión con las indicaciones del profesor.

La primera máquina se llama maquina1, el usuario creado es javi y su dirección IP: 192.168.56.105.

La segunda se llama maquina2, el usuario es nacho y su dirección IP: 192.168.56.110.

La interfaz de red que he usado para ambas máquinas son las siguientes:

```
### State of the control of the cont
```

El primer objetivo de la práctica es que se conecten mediante ssh entre ellas y con el host.

```
Section 1.1 According to the Color of the Co
```

En la captura de arriba es la conexión ssh de ellas.

A continuación viene la conexión con el host.

```
The body of the control of the contr
```

```
